#### 1.Question 1

Machine learning is an "iterative" process, meaning that an AI team often has to try many ideas before coming up with something that's good enough, rather than have the first thing they try work.

# 1/1 point C True

**(•**)

False

#### Correct

#### 2.Question 2

Say you want to use Machine Learning to help your sales team with automatic lead sorting. I.e., Input A (a sales prospect) and output B (whether your sales team should prioritize them). The 3 steps of the workflow, in scrambled order, are:

- (i) Deploy a trained model and get data back from users
- (ii) Collect data with both A and B
- (iii) Train a machine learning system to input A and output B

What is the correct ordering of these steps?

# 1 / 1 point

Ö

(i) (ii) (iii)

**(** 

(ii) (iii) (i)

О
(ii) (i) (iii)
0
(i) (iii) (ii)
Correct
3.Question 3
What are the key steps of a Data Science project?
1 / 1 point
Collect data
0
Analyze the data
С
Suggest hypothesis or actions
•
All of the above
Correct
4.Question 4
Machine Learning programs can help: (select all that apply)
1 / 1 point  ▼
Automate visual inspection in a manufacturing line
Correct
✓ ·
Automate resume screening
Correct
Customize product recommendations
Correct
Automate lead sorting in sales

Correct
5.Question 5 Unless you have a huge dataset ("Big Data"), it is generally not worth attempting machine learning or data science projects on your problem.
1 / 1 point
True
• False
Correct
6.Question 6 Say you want to build an AI system to help recruiters with automated resume screening. Which of these steps might be involved in "technical diligence" process? (Select all that apply.)
1 / 1 point
Ensuring that this is valuable for your business (e.g., estimating the project ROI)
Making sure that an AI system can meet the desired performance
Correct
Making sure you can get enough data for this project
Correct
Defining an engineering timeline
Correct
7.Question 7 Which of these statements about "business diligence" do you agree with?
1/1 point
Business diligence is the process of ensuring that the envisioned AI technology is feasible.
c
Business diligence can typically be completed in less than a day.

0
Business diligence is the process of ensuring that the AI technology, if it is built, is valuable for your business. – Correct Answer
0
Business diligence applies only if you are launching new product lines or businesses.
Correct
8.Question 8 You want to use supervised learning for automated resume screening, as in the example above. Which of the following statements about the Training Set are true? (Select all that apply.)
1 / 1 point
It should give examples of the input A (resume) but not necessarily the desired output B (whether to move forward with a candidate).
The Training set and Test set can be the same dataset.
It should give examples of both the input A (resume) and the desired output B (whether to move forward with a candidate) Correct
Correct
It will be used by the AI team to train the supervised learning algorithm Correct
Correct
9.Question 9 For your automated resume screening application, you are now providing a Test Set to the Al team. Which of the following statements about the Test Set are true? (Select all that apply.)
0.5 / 1 point
It should give examples of the input A (resume) but not necessarily the desired output B (whether to move forward with a candidate).
The Test Set should ideally be identical to the Training Set.
This should not be selected

Correct

It should give examples of both the input A (resume) and the desired output B (whether to move forward with a candidate)

10.Question 10

Which of these are reasons that it's often unrealistic to expect an ML system to be 100% accurate?

1/1 point

C

You might not have enough data

C

Data can be mislabeled

C

Data can be ambiguous

All of the above. - Correct

Correct

It will be used by the AI team to evaluate the performance of the algorithm. - Correct answer
